

Corn DDU

- ◇ A first-in-kind weather solution for corn
- ◇ No limits on insurability or exclusions on varieties, practices or acres
- ◇ No proof of loss and payment is solely determined by weather data!
- ◇ Be paid if temperatures are warmer than normal during your pollination window
- ◇ Elect the acres you want to protect!

WHAT IS CORN DDU?

A weather index product which protects against high daytime and nighttime temperatures during corn pollination.

HOW DOES IT WORK?

Growers are paid for DDU's that occur during pollination. The Temperature Data determines the timing and length of the pollination period, and the resulting DDU's that finalize the payment amount. Growers report the actual Planting Dates for each field enrolled in the program. Growers elect the Corn DDU Seed Varietal best matching the planted varieties.

AVAILABILITY

Contiguous US

SIGN-UP DEADLINE

April 15th

WHAT ARE DDU's?

Damage Degree Units

OTHER IMPORTANT DETAILS

- Minimum Premium: \$500
